Joined Gefässpraxis Biel in 2018 as partner.

Affiliated physician at the Hirslanden Clinic Linde Biel, Beausite Bern and the Lindenhof Hospital in Bern.

Endovenous Laser Ablation Course

The EVLA course is aimed at prospective angiologists who wish to learn the techniques of EVLA, phlebectomy and sclerotherapy, from easy cases to recurrent varicose veins depending on your prior knowledge. You will see 4-6 cases from the marking of the veins to the operation and wound care and application of support stockings. The interventional angiologists will explain the individual cases and the treatment plan and show you the different techniques. A lecture on different treatment methods and a discussion of the cases treated will complement the practical course. The course dates will be arranged individually with the participants.

Endovenous Laser

The veins are treated with the advanced SMART laser from Lasotronix, which has a wavelength of 1940 nm. It allows precise and controlled treatment of the veins and enables the highest occlusion rates while protecting the surrounding tissue.
